Skills

TypeScript, React, Next.js

C#, ASP.NET, SQL

Python, MicroPython

C, C++

Employment

Full-Stack developer at Blue Star Planning, Rotterdam

December 2021 — January 2023

- Developed various IoT devices and 3D printing the casing. Intended to gather various data, such as sound recordings, loudness, temperature and humidity, air quality and RPM values. The sound recording go through IIR second-order section filtering and A-Weighting before saving. The devices are placed at different locations in Rotterdam.
- Developed the back-end to process the data gathered by the devices and developed the front-end at **https://geluidsvervuiling.eu**, where the sound recordings and loudness values are available depending on the device and it's location.

Salesman at Gamma, Den haag

February 2021 — Present

- Identified and maximized sales opportunities, and increased customer retention rates.
- Worked to ensure a positive and hassle-free customer experience.

Portfolio

Skills

• Back-End development in C# with ASP.NET and SQL Server Management Studio or Azure Data Studio. Familiar with REST API, Web API and MVC.

• Front-End development in TypeScript, using React and Next.js to create SEO optimized and interactive websites. Familiar with Next.js concepts: SSR, SSG, CSR and SWR hooks.

• Low level C, C++ programming to develop high performance and efficient applications.

• High level Python, MicroPython programming for embedded devices.

- Working in Azure Cloud, Azure DevOps and GitHub environments.
- Ability to create 3D model with Fusion 360 and work with 3D printers.

Experience

- Developed an autonomous self-driving robot utilizing camera and Lidar scanner, with the ability to navigate through a variety of courses and avoid obstacles. In addition to the live camera feed, the robot offers remote control functionality using a PS4 or PS5 controller, or via a website hosted on a local server. The source code for the robot is written in C++ and Python, utilizing TensorFlow for machine learning tasks, and is available at **https://github.com/SadraShameli/ProjectAI**
- Developing a graphics game engine from the ground up, using C++ and the DirectX 12 API featuring an interactive user interface built with ImGui. Able to create scenes, add cameras, and navigate freely within the game environment. Using an entity component system to add objects, set properties such as color, texture, and world position.
- Made an interactive Social Robot, designed the PCB and a suitable case using 3D printing. Assists low visioned people in walking safely.
- Designing a mobile application focused on promoting and supporting people's health, providing personalized diet plans and recommendations.
- Achieved a third-place ranking at the provincial level in the Robocup competition in Iran.

Education

VWO - N&T, Grotius Collegie, Delft

September 2020 — May 2023
