Sadra Shameli

Software engineer and futures trader with 3+ years in NQ futures and multiple prop firm payouts in the last year. Currently running my own capital through a modular Python trading framework I built. Looking to bring this combination of trading discipline and engineering ownership.

EXPERIENCE

Nobears

Full-stack developer

Jun 2024 - Present

<https://www.nobears.com>

Rotterdam, The Netherlands

Full-stack developer building custom WordPress sites and platforms, shipping and maintaining 15+ WordPress platforms for Bram Ladage, Geleidehond, Topbrands, Van der Lelie, PlatformACCT and more.

- Designed reusable component library and faster development processes and tools, saving roughly 1-2 days of work on every new project

Skills: PHP, WordPress, Twig, TypeScript, React, SCSS, MySQL, Redis, Docker

Blue Star Planning

Full-stack developer

Dec 2021 - Jun 2023 · 1 yr 6 mo

<https://bluestarplanning.com>

Rotterdam, The Netherlands

Built a full-stack telemetry registering and displaying platform. Designed 3D-printed IoT devices, with a backend that processes the incoming data, and a frontend for visualisation purposes.

- Set up the Azure DevOps CI/CD pipeline the team continues to ship with

Skills: React, TypeScript, Next.js, ASP.NET, SQL, C++

PROJECTS

TradingBot

Modular quantitative trading framework

Sep 2025 - Present

<https://github.com/SadraShameli/TradingBot>

- Running 4 uncorrelated strategies across multiple tickers and timeframes to maximize time and asset diversification for increased ROI and Sharpe
- Real-time risk management with drawdown kill switches and adaptive sizing
- Strict OOP architecture across layers such as live and paper trader, data source, broker api, cache, notifications, ai optimisation and real-time risk management engine
- PyTorch-driven position scoring with chained validators tuned via Bayesian optimisation with strict walk-forward and Monte Carlo validation built around preventing overfitting
- Multiprocess, highly concurrent execution pipeline keeping the trading loop very fast with heavy focus on speed

Skills: Python, PyTorch, NumPy, Pandas, Pydantic, Redis, Docker

sadra.nl

Personal site & trading toolkit

Mar 2024 - Present

<https://sadra.nl>

- Trading toolkit covering prop-firm sizing, pre-trade checklists, and a trading journal
- Backend and frontend for the Sensor Hub IoT devices, handling configuration, telemetry ingestion, noise recording storage and display
- End-to-end type safety from database to UI via tRPC, Zod schema and Drizzle ORM, with Better Auth for sessions and Sentry for production observability
- Strict CI with Vitest unit tests and Playwright end-to-end suite catching regressions before every deploy
- Multiple integrated apps sharing one auth, API and design system: resume generator, portfolio, trade journal, prop calculator, accounting importer

Skills: TypeScript, Next.js, tRPC, Drizzle, Tailwind CSS, Better Auth, Sentry

Mino Markt

Persian markt & grill

Nov 2024 - Present

<https://minomarkt.nl>

- Custom WooCommerce storefront covering online ordering and in-store pickup
- Loyalty program, subscriptions, wishlist, and refund workflows
- Strict OOP PHP backend with full type safety and enum usage, with twig based components and blocks.
- Customer-facing front end in Bootstrap and TypeScript with Google Maps store locator and live store availability

Skills: PHP, WordPress, WooCommerce, Twig, TypeScript, Bootstrap, SCSS, MySQL, Docker

Sensor Hub

IoT telemetry devices

Feb 2024 - Present

<https://github.com/SadraShameli/SensorHub>

- 3 devices currently streaming temperature, humidity, air pressure and loudness data to sadra.nl across the Netherlands
- Modular OOP C++ firmware for ESP32 with one task per peripheral communicating through lock-free queues, so sensing, networking and storage run truly in parallel
- Sub-100 ms boot in release through multithreading and tight task lifecycles, with heavy focus on performance and reliability
- Failsafe layer persisting the last 25 runtime failures for post-mortem analysis, plus encrypted on-device storage keyed off the device MAC

Skills: C++, ESP32, IoT, 3D Printing

Project A.I.

Self-driving robot

Sep 2022 - Dec 2022

<https://github.com/SadraShameli/ProjectAI>

- Autonomous driving via TensorFlow on-device inference, navigating a course and avoiding obstacles with no cloud dependency
- Multithreaded C++ firmware running sensing, inference and motor control on separate threads to keep the control loop inside real-time budgets
- Custom 3D-printed chassis tuned for the sensor and motor layout
- Manual override via PS4 / PS5 controller as a safety fallback

Skills: Python, C++, Machine Learning, 3D Printing
